

**As of 4/20/17**

**\$11.2 MILLION BEACH REPLENISHMENT COMPLETE**

Rehoboth and Dewey's most recent round of beach replenishment was completed in early 2017 and early reviews on the quality of sand pumped are good.

The total amount of sand pumped was 653,000 cubic yards – 384,000 for Rehoboth and 269,000 in Dewey.

While two storms in early 2016 caused significant damage to the Cape Regions beaches and dunes, this project was done as part of a federal and state partnership that sees replenishment done in 3-year intervals.
